

# UNIT AND DOOR COLOURS

Make sure the carcass colour you have selected is correct, our system will automatically select a best or recommended carcass colour. You also can select an alternative colour for a contrast.

## COLOUR CONTRAST

Try contrasting your doors and cabinets for an individual look.

## COLOUR MATCH

All our standard door colours have a colour matched cabinet option.

# END PANELS

1. The diagram above show where end panels can be used.
2. Please check the panels and the amounts that you have added are correct.
3. If you are not using end panels please take into account ordering extra plinths as they will need to be returned on the units..

## TOP TIP

All panels are over sized to be cut down on site, this is in case of walls being out of line.

# CORNICE, PELMET AND PLINTHS

These are supplied in long lengths, these are variable depending on door style. Please ensure you have enough to complete your kitchen, remember to include any material the needs to be returned to the wall. Please note that off cuts of plinths can also be used as fillers.

## TOP TIP

When measuring up for these please allow 30mm per cut.

# UNIT HEIGHTS

We offer three different height options for tall and wall units, please ensure you have selected the correct height combinations as shown in the diagram.

Tall units	Wall units	Dresser units
1970mm	720mm	1210mm
2150mm	900mm	1390mm
-	575mm	-

# APPLIANCE DOORS

1. Please check that the appliance doors that you have added are compatible.
2. Integrated under counter appliances and extractors do not require a housing, accept for single ovens.
3. Drawerline doors are only available with Fully integrated appliances.

## FULLY INTEGRATED

Select door:  
715mm X 597mm

## SLIMLINE INTEGRATED

Select door:  
715mm X 447mm

## SEMI INTEGRATED

Select door:  
570mm X 597mm

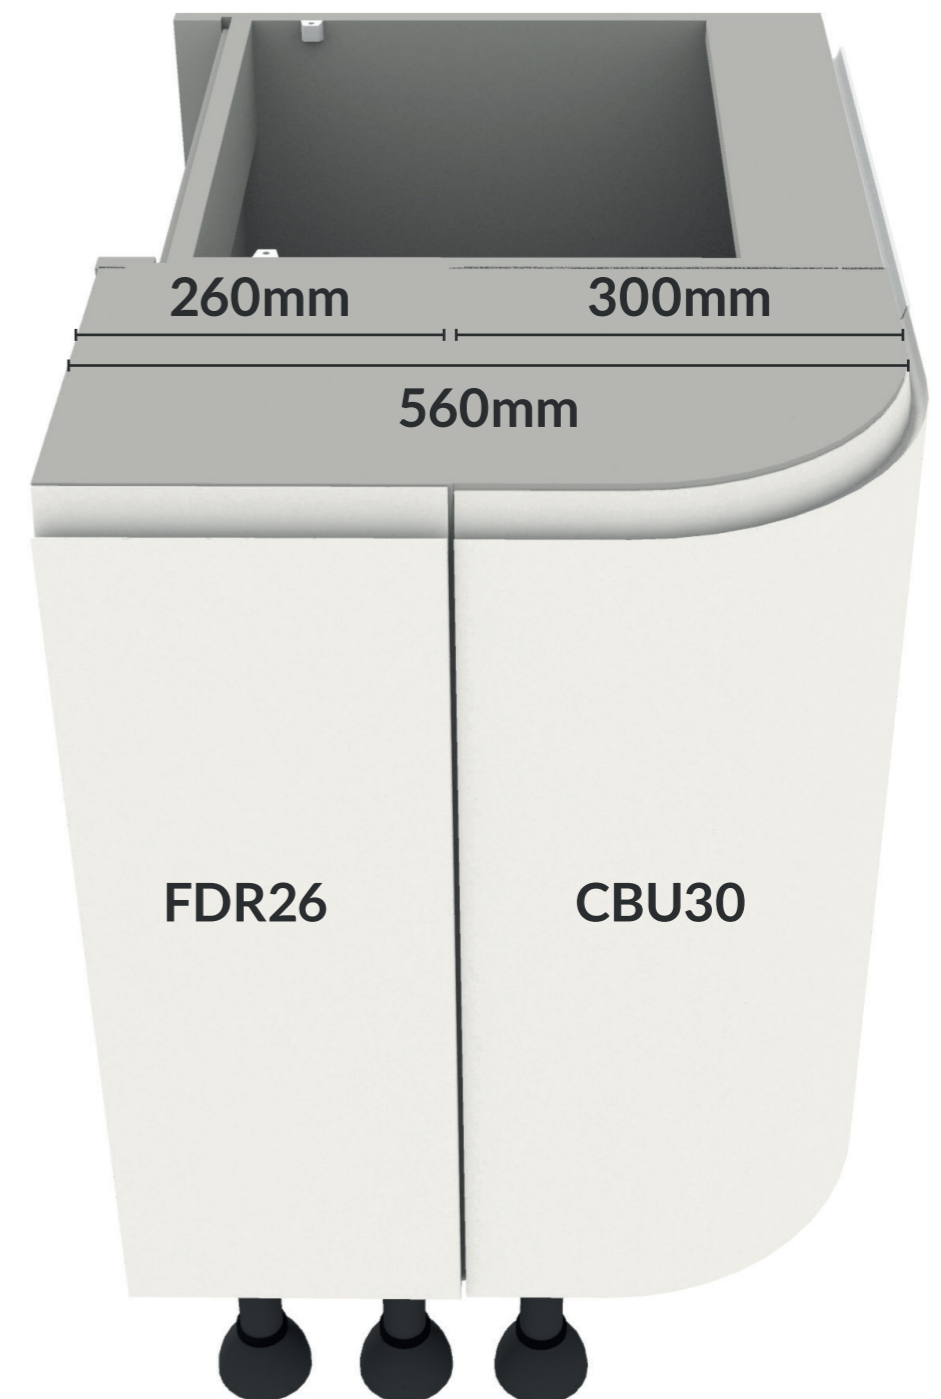

## INTEGRATED EXTRACTOR

Select door:  
450mm X 597mm

# CURVED UNITS

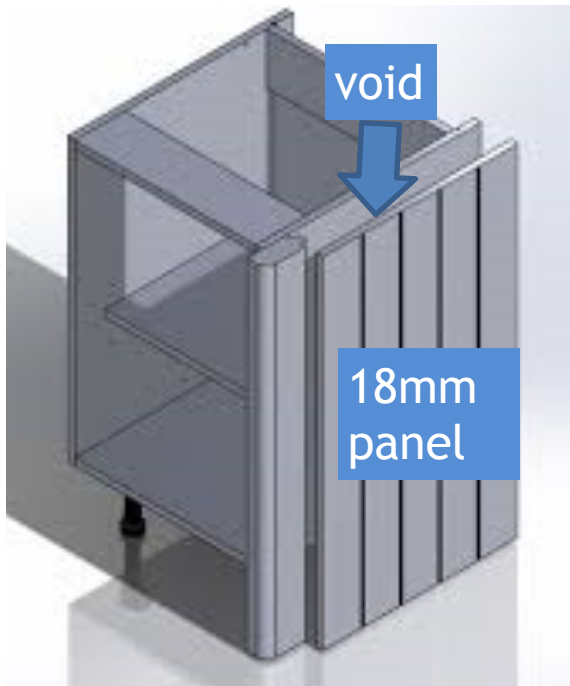

When ordering curved units please take into account that curved plinth cornice / pelmet is needed. Ensure you have the additional curved cornice, pelmet and plinths where required.

## CURVED BASE UNITS

If using a CBU30 in a standard run of base units you will also require a 260mm FDR26 to sit behind the curved unit to create a standard 560mm base unit depth.

# 7. RADIUS FEATURE ENDS

WHEN ORDERING RADIUS FEATURE END FOR TOWER, WALL OR DRESSER UNIT A CORNICE CORNER BLOCK IS REQUIRED.

If you have selected 2150mm tall units you would need to order 2 x dresser radius ends.

If you intend to fit radius feature ends in your kitchen you also require 18mm panels to use with the feature ends. When adding radius feature ends please add the size of these to your planning dimensions.

# 8. SINKS & SINK UNITS

## CORRECT MATCHES ABOVE

We offer sink base unit in a wide variety of widths and styles. Please check the lengths width of your sink and that it is suitable for the unit that you have selected. If using a sink pan drawer please check the depth of your sink.

Inset sink

Please check the information on the sinks, this will specify a minimum carcass size needed.

# 9. CORNER UNITS

Please make sure that you add the dimensions of the corner post when measuring your kitchen.

Straight corner wall requires a corner post to line up the top and bottom doors for symmetry.

When planning your kitchen please make sure you take into account the measurement of the corner void and post. Wall units do not have a void, corner posts are optional for symmetry.

No void on an L shape corner

A corner void gives a bigger access and less corner to reach into. Generally this is where soil pipes enter the kitchen.

# 10. OVEN HOUSINGS

Under counter double does not require a housing

Built under single oven housing

## Appliance Housing Configurations

Overall Height 2115mm  
 Unit Height 1970mm  
 Plinth Height 150mm
